Works Computing
1801 American Blvd. East
Suite 12
Bloomington, MN 55425

To succeed, your organization needs to use the latest information technology. Yet the very same technology can also make you vulnerable to risks. Works Computing helps organizations assess their vulnerability to a broad spectrum of technological and organizational risks, and develops customized IA solutions to contain and control them.

Assessing Risk

Works Computing begins every IA project with a Risk Assessment of your entire enterprise IT and communications system. Within a few hours, we can locate and identify all potential and existing vulnerabilities in your network. Works uses this information to develop a personalized IA plan that details the strategies your business needs to secure its entire information architecture from internal and external threats.

Securing Your Future

From consulting and risk assessments through training, we have your security needs covered to help you design, develop, implement, operate and maintain your secure infrastructure. Consider us your trusted advisor to securing your enterprise IT and communications environment. Take advantage of any or all of the following Information Assurance solutions:

 - ▼ Payment Card Industry (PCI)
 - ▼ Children's Online Privacy Protection Act (COPPA)

Security Training

- ▼ General Security
- ▼ Network Security
- ▼ System Security
- ▼ application/Programming Security
- ▼ Physical Security

Compliance Ready

Works Computing Information Assurance solutions address various industry certification and compliance regulations. Our certified IA engineers have experience in compliance regulations (HIPAA, SOX, GLBA, PCI) that may affect your business, as well as remediation of wireless and other network items. We also offer compelling internal security validation and threat mitigation services through NAC and endpoint integrity – allowing authentication of all users before they are allowed on your network. These services also can validate the security posture of each user (Antivirus, OS patch level, personal firewall, anti-malware, etc.) and block non-compliant users before they have the opportunity to breach your system.

Going Beyond the Sale

Throughout every step of the sales cycle, Works Computing wants to ensure your technology investment meets your organization's mission-critical goals. That's why we have an onsite, state-of-the-art demonstration lab so you can try a solution before you buy it. And, we have a 30-seat training center at your disposal to train your staff on your new IT investment.

Works Computing

Providing Enterprise IT Solutions that WORK

Established in 1994, Works Computing has a long history of helping businesses meet their enterprise IT goals through personalized hardware, software and service solutions that work. As a Minnesota-based technology solutions provider, we believe that people come first. With that in mind, our solutions are designed specifically for your current and future enterprise needs.

To help you get the most out of our technology products and services, we begin by listening. Only then can we share our professional insights – providing you with more than just surface-level solutions. These insights combine experience, knowledge and a down-to-earth approach. The result? A unique ability to recommend, design, deploy and maintain the right IT solutions for your company.

From IT transformation and modernization to consolidation and virtualization, we are your local IT solutions partner. It's time to experience IT that not only works, but stands the test of time.

What can we do to help strengthen your IT environment?
