

Join Works Computing for a lunch and learn to discuss MS Exchange 2010 in your data center.

Now, more than ever, your organization requires cost-effective and flexible communication tools. With Microsoft Exchange Server 2010 you can achieve new levels of reliability and performance with features that simplify your administration, help protect your communications, and delight your users by meeting their demands for greater mobility.

Microsoft Exchange Server, the cornerstone of Microsoft's Unified Communications solution, is a flexible and reliable messaging platform that can help you **lower your messaging costs by 50-80%, increase productivity** with anywhere access to business communications, and **safeguard your business** with protection and compliance capabilities that help you manage risk.

Presented by Work's internal expert, Rich Platt, this seminar was recently given at the **2010 HP Technology Forum to a standing room only crowd**. Don't miss this chance to hear why running Microsoft Exchange 2010 in your data center is the smart solution.

Please join us!

**Thursday, August 5, 2010
